

Ennoble Social Innovation Foundation

Ennoble Social Innovation Foundation is a Section 8 non-profit working to transform government schools into lovable, future-ready learning ecosystems. Its core belief is that lasting school improvement does not come from isolated inputs, but from strengthening the full ecosystem around a child — teaching practice, student participation, school environment, and community ownership together. That integrated approach defines Ennoble's institutional identity and its work in public education.

At the centre of Ennoble's work is its Holistic School Transformation (HST) Program, a school-embedded model that strengthens four interconnected pillars: teacher leadership, student leadership and culture, community participation, and school infrastructure and learning spaces. The program is designed to help schools become more effective, participatory, and sustainable over time by building internal capacity rather than dependence on external inputs alone.

Alongside HST Program, Ennoble works across Maker STEAM & Robotics Labs, Model School Infrastructure, Model Aanganwadi Infrastructure, WASH, and school-based sustainability initiatives such as Green School. Across these interventions, Ennoble creates child-friendly learning environments, supports experiential and project-based learning, improves sanitation and drinking water systems, strengthens teacher facilitation, and builds local ownership structures that help schools use and sustain change over time.

What distinguishes Ennoble is the way it combines visible school transformation with deeper educational change. Its approach is teacher-led, community-owned, and aligned with school and local governance systems, helping ensure that interventions are not only implemented, but actively used, maintained, and strengthened. This gives Ennoble a distinctive place in the education landscape: it is not simply delivering projects into schools, but helping build durable models of school improvement that can be demonstrated, trusted, and replicated.

The organisation's work has been recognised through awards including the Infosys Aarohan Award for Product Innovation, the Cemex-Tec Social Entrepreneurship Award (Mexico), recognising Ennoble among the top 15 social enterprises globally, the Best Start-Up Award from Jai Hind College, Maharashtra Government recognition through MSINS, participation in the TieCon Silicon Valley Startup Summit, the Cluster of Excellence Award, the Model Anganwadi Award, the Best Social Impact Award, the CII India Design Silver Award for the STEAM program, the Times CSR Award 2025, and the Indian CSR Awards 2025 – Most Impactful NGO of the Year.

Ennoble is driven by a long-term vision to help build responsible, socially conscious, and future-ready citizens by strengthening the schools that shape their lives.
